HIGH SCHOOL
Shree Shiv Pratap Inter College Amethi U.P.
2014 - 2015

WORK EXPERIENCE

Training (Full Stack Developer)
Hanumant Technology Pvt. Ltd.
01/2024 - Present
Achievements/Tasks
At the start of training of training there of 6 months of full stack developer learning program in which I was trained on technology Full Stack by the trainer.

PERSONAL PROJECTS

Build an E-Commerce web application with vanilla JavaScript, local storage and API handling
(03/2024 - 04/2024)
- It is a JavaScript based project.
- In this project, we're building an e-commerce web application entirely with vanilla JavaScript, leveraging local storage for client-side data management and handling API calls for server communication. By using vanilla JavaScript, we maintain full control over the frontend logic, ensuring a lightweight and efficient application. Local storage allows us to store user data locally, providing seamless persistence across sessions.
- Technology Used : Vanilla JavaScript, Local storage, API Handling, HTML5, CSS3

Implementing React Context API (02/2024 - 02/2024)
- Implementing the React Context API has been instrumental in creating a more efficient and scalable web application.
- **Create Context**: Initialize context with React.createContext().
- **Provide Context:** Wrap components with Provider and pass data using value.
- **Consume Context**; Access shared data using use Context hook or Consumer Component.

Single Page Application using Tailwind CSS and React Router Dom (01/2024 - 01/2024)
- **Setting Up React Router Dom :** Install React Router Dom Package. Define routes using <Route> components to render different components based on the URL.
- **Styling with Tailwind CSS :** Install Tailwind CSS and configure it in your project. Apply Tailwind utility classes directly in JSX or create custom CSS components.
